

• Level 5 – Advanced Diploma in Computer Systems

COURSE OVERVIEW

In computer systems programme at advance diploma level, the students are taught to use the skills and understanding required to manage computer systems, as part of the support service of an organization. The management of the computer systems includes network maintenance and project planning, security, and standard operation procedure (S.O.P) development and implementation.

COURSE CONTENT

Level 5

- Computer Network Maintenance Management
- Computer System Asset Management
- Computer System Security Management
- Disaster Recovery Management
- Computer System & Standard Operating Procedure (S.O.P) Development & Implementation Management
- Server Scripting
- Introduction To Engineering Programming
- Introduction To Programmable Logic Controller
- Introduction To Peripheral Interface Controller (PIC)

DURATION

Level 5 – 12 months

ENTRY REQUIREMENTS

Obtained SKM level 3 & DKM level 4 in computer systems course.

AWARD

On successful completion of each level, students are awarded with the DLKM qualification by JPK, Ministry of Human resources in certifying their skills competency.

CAREER OPPORTUNITIES

The continued growth in computer network services and various computer related equipment in industry is increasing the demand for graduates who can implement and manage computer systems.
